TASK 1:

```
using System;
using System.Collections.Generic;
using System.ComponentModel;
using System.Data;
using System.Drawing;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.Windows.Forms;

namespace FirstWinFormsApp
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();
        }

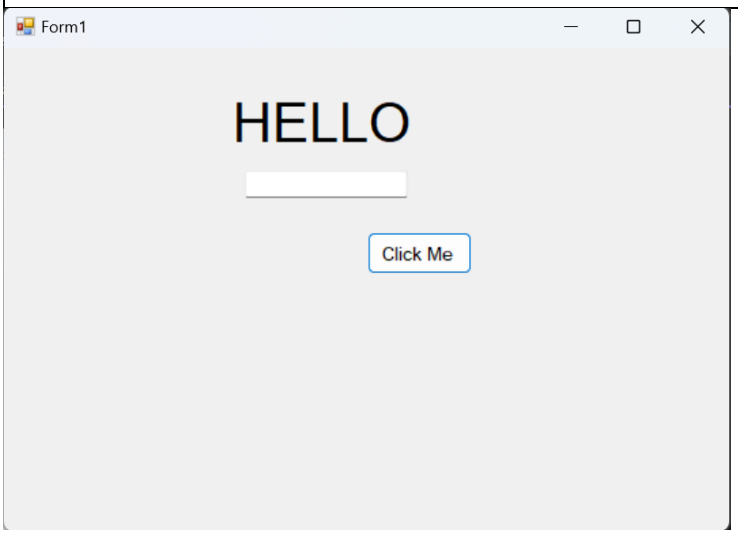
        private void textBox1_TextChanged(object sender, EventArgs e)
        {

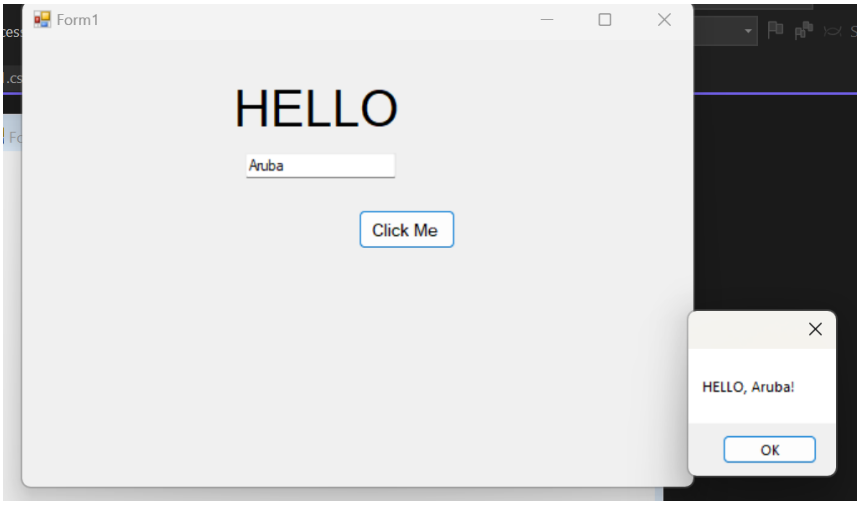
        }

        private void button1_Click(object sender, EventArgs e)
        {
            string username = textBox2.Text;
            MessageBox.Show("HELLO, "+username+"!");
        }

        private void label1_Click(object sender, EventArgs e)
        {

        }
    }
}
```





TASK 3:

```
using System;
using System.Collections.Generic;
using System.ComponentModel;
using System.Data;
using System.Drawing;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.Windows.Forms;

namespace FirstWinFormsApp
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();
        }

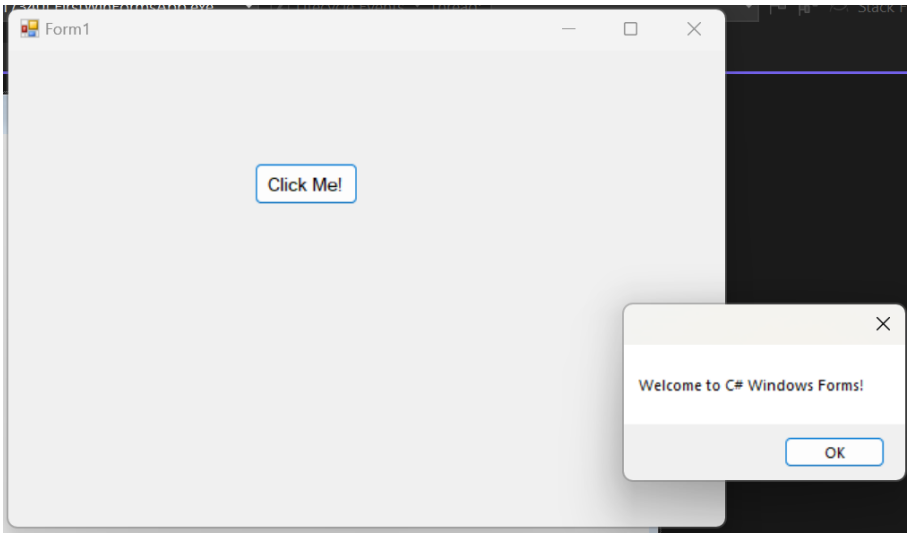
        private void textBox1_TextChanged(object sender, EventArgs e)
        {

        }

        private void button1_Click(object sender, EventArgs e)
        {
            MessageBox.Show("Welcome to C# Windows Forms!");
        }

        private void label1_Click(object sender, EventArgs e)
        {

        }
    }
}
```



TASK 4:

```
using System;
using System.Collections.Generic;
using System.ComponentModel;
using System.Data;
using System.Drawing;
using System.Linq;
using System.Text;
using System.Threading.Tasks;
using System.Windows.Forms;

namespace simplecalculator
{
    public partial class Form1 : Form
    {
        public Form1()
        {
            InitializeComponent();
        }

        private void textBox1_TextChanged(object sender, EventArgs e)
        {

        }

        private void textBox2_TextChanged(object sender, EventArgs e)
        {

        }

        private void button1_Click(object sender, EventArgs e)
        {
            double num1=Convert.ToDouble(textBox1.Text);
            double num2=Convert.ToDouble(textBox2.Text);
            double result=num1+num2;
            labelResult.Text = result.ToString();
        }

        private void labelResult_Click(object sender, EventArgs e)
```

```
        {

        }

        private void button2_Click(object sender, EventArgs e)
        {
            double num1 = Convert.ToDouble(textBox1.Text);
            double num2 = Convert.ToDouble(textBox2.Text);
            double result = num1 - num2;
            labelResult.Text = result.ToString();
        }

        private void button3_Click(object sender, EventArgs e)
        {
            double num1 = Convert.ToDouble(textBox1.Text);
            double num2 = Convert.ToDouble(textBox2.Text);
            double result = num1 * num2;
            labelResult.Text = result.ToString();
        }

        private void button4_Click(object sender, EventArgs e)
        {
            double num1 = Convert.ToDouble(textBox1.Text);
            double num2 = Convert.ToDouble(textBox2.Text);
            double result = num1 / num2;
            labelResult.Text = result.ToString();
        }

        private void clearfiels_Click(object sender, EventArgs e)
        {
            textBox1.Text = "";
            textBox2.Text = "";
            labelResult.Text = "";
        }
    }
}
```
